

## Developer Assignment

Thank you for your time and interest in Scalapay, it was a real pleasure chatting with you.

As discussed, here is the coding assignment to take a look at. We will use the output of this as the basis for our technical face to face conversation.

Please let me know if you have any questions and feel free to call me on 0401 627 377 or email [justin@scalapay.com](mailto:justin@scalapay.com)

Thanks again for taking part and look forward to talking with you soon.

## Scalapay Coding Assignment

The goal is to write a simple app using the Scalapay API.

Our Scalapay API docs can be found here:

<https://developers.scalapay.com/docs>

**Please write a server that has APIs to:**

- Get all items (including fields: gtin, name, category, sku, brand, priceId)
- Get a specific item (including fields the same as above)
- Get item by category
- Creates an order:
  - Save orders to the local database
  - Call the v2/orders endpoint.

Additional

Add a README.md file that explains how to run the application.

The back-end should be written using Node.js.

Don't forget!!!

Best practices

Testing

If you can get back to me when you think you can close out the task that would be appreciated.
